Introduction

This handbook sets forth the basic policies, requirements and procedures for graduate students pursuing degrees in Tropical Medicine. You should read this very carefully so that you are clear about your responsibilities as a student and the responsibilities of the program to you. If you have any questions about any of the information presented herein, please contact the graduate chair, Dr. Sandra Chang (email: sandrac@hawaii.edu /ph: 808. 692.1607). The earlier you clarify any matter of concern to you, the less likely it will create any problems for you later. We wish you great success in pursuing your educational goals and hope that this handbook provides you with a good tool in meeting those goals.
**Program Overview**

Tropical Medicine is the study of infectious diseases that occur more commonly in tropical regions of the world. However, in today’s era of globalization and modern transportation, diseases that were once confined to the tropics have spread geographically and now play a significant role in the 20th century global resurgence of infectious diseases. As such, research in the area of Tropical Medicine has greatly increased in importance in the past 20 years.

The Department of Tropical Medicine and Medical Microbiology at the John A. Burns School of Medicine was founded in 1972. In 2004, it merged with the Department of Pharmacology to become the Department of Tropical Medicine, Medical Microbiology and Pharmacology. The department offers graduate programs leading to the MS and PhD degrees in Biomedical Sciences (Tropical Medicine). A major goal of the Tropical Medicine graduate program is to provide Hawaii and its neighboring Asian and Pacific nations with the expertise needed to conduct tropical infectious diseases research. Tropical Medicine faculty performs studies on dengue, West Nile, HIV/AIDS, hepatitis, viral and bacterial encephalitis, malaria, and Kawasaki disease. A multidisciplinary approach is taken which encompasses the fields of immunology, microbial pathogenesis, epidemiology, pharmacology, laboratory diagnostics, socio-ecological systems, and human, microbial and vector ecology. Pharmacology faculty research includes pharmacokinetics, pharmacodynamics, molecular studies of drug metabolism, and reproductive pharmacology. Certain research projects seek to answer fundamental questions associated with the transmission dynamics and pathogenesis of these diseases while others encompass translational studies to improve approaches for tropical disease diagnosis, treatment, and prevention. These studies can be laboratory-based, field-based, clinic-based, or include a combination of all three.

The field of Tropical Medicine requires knowledge of virology, bacteriology, parasitology, entomology, immunology, cell and molecular biology, epidemiology, ecology, bioinformatics, behavioral science and clinical medicine. In this respect, the Tropical Medicine program at UHM provides learning opportunities in a range of disciplines available in few other university departments. The department participates in joint research projects with several community hospitals and collaborates closely with the State of Hawai‘i Department of Health, providing instruction and expertise in bioterrorism preparedness and infectious disease diagnosis using the latest technologies. In addition to local collaborations, department faculty have partnered with several international institutions in the Pacific, Southeast Asia and Africa to conduct field research in infectious diseases.
Faculty

Regular Graduate Faculty
V. R. Nerurkar, PhD (Department Chair) – pathogenesis of infectious diseases, delineating cellular and molecular mechanisms underlying microbe-host interaction
J. Barbour, PhD – HIV immunology
S. N. Bennett, PhD – molecular evolution and epidemiology of emerging infectious diseases
S. P. Chang, PhD (Graduate Program Chair) – immunology, molecular biology, malaria vaccine development, malaria metabolomics
M.L. Chapagain, PhD – pathogenesis of viral encephalitis, microbe:host interactions
A. Collier, PhD – pharmacology, pharmacokinetics, reproductive pharmacology
A. R. Diwan, PhD – medical virology, chemotherapy, vaccines (emeritus)
E. Furusawa, MD, PhD – viral chemotherapy (emeritus)
W. L. Gosnell, PhD – host parasite interactions, malaria, immunology
G. S. N. Hui, PhD – parasitology, immunology, cell biology
P. H. Kaufusi, PhD - pathogenesis of West Nile virus
K. J. Kramer, PhD – parasitology, epidemiology, leptospirosis, HIV serodiagnosis
F. D. Miller, PhD – epidemiology of infectious diseases
L. Ndhlovu, MD, PhD – HIV immunology
D. W. Taylor, Ph.D. – malaria immunology, maternal and child health
S. Verma, PhD – molecular pathogenesis of flavivirus infections, including West Nile virus
W-K. Wang, MD, ScD – immunology and pathogenesis of dengue virus infections
K. Yamaga, PhD – immunological mechanisms of diseases (emeritus)

Cooperating Graduate Faculty
J. M. Berestecky, PhD – enteric bacteria
L. Chang, MD – application of advanced neuroimaging techniques to study brain changes associated with HIV, substance abuse, brain development and aging
G. Erdem, MD – molecular epidemiology of group A streptococcal and staphylococcal infections; complications of strep infections like acute rheumatic fever
Y. Lu, PhD – gene therapy for HIV-1 infection, aquaculture virology
M. E. Melish, MD – staphylococcal infection and toxins, clinical infectious disease, Kawasaki syndrome
B. Shiramizu, MD – pathobiology of HIV-associated disorders
E. K. Tam, MD – inflammation, immunologic mechanisms of pulmonary diseases, genetic and environmental determinants of asthma
R. Yanagihara, MD – emerging and re-emerging infectious diseases

Affiliate Graduate Faculty
F. Mercier, PhD – neurovirology
C. F. T. Uyehara, PhD – developmental and cardiovascular pharmacology
Administrative Staff

Sheila Kawamoto, Administrative & Fiscal Support Specialist
Cori Watanabe, Junior Specialist
Becky Nakama, Institutional Support
Justin Forsythe, Institutional Support
MS and PhD Program Requirements

Master’s Plan A (Thesis)
- Preliminary conference with graduate program chair
- Appointment of interim advisor
- Pre-Candidacy Progress (Form I) (complete relevant sections)
  - Preliminary conference with interim academic adviser
  - Identification and remediation plan for deficiencies (if applicable)

Diagnostic Evaluation
- First or early in the second semester of residence
- Open book, short essay exam to evaluate background in infectious disease microbiology & immunology
- Used to advise the student on course of study and areas needing improvement

General (Qualifying) Examination
- Second semester of residence
- General exam (closed book, short essay answers with oral followup) with questions composed by TRMD faculty
- Evaluates student’s knowledge base of Tropical Medicine core course content (general medical microbiology, virology, bacteriology, parasitology, immunology, and bioinformatics)
  - Students must pass all sections of the exam
- Used to evaluate student progress and advise on course of study to correct weaknesses
  Pass:
  - Advancement to candidacy for MS degree
  a student whose exam and overall academic performance has been exceptional may be recommended for continuation to the PhD program upon completion of the MS degree or for transfer to the PhD program
  Fail:
  - Failed sections or the entire exam may be repeated once within 6 months of the date of the first exam
  - A student who fails the general examination a second time will be dismissed from the program
  - Pre-Candidacy Progress (Form I) (complete relevant section and submit to Graduate Division)
  - Successful completion of qualifying examination

Coursework requirements
(see section on Tropical Medicine Curriculum for course details)
- 30 credit hours (must be taken for an A-F letter grade)
- 18 hrs approved course work including TRMD core courses and excluding 699 and thesis 700
- Minimum 12 hrs in courses numbered 600-798
  registration in thesis 700 during last semester; at least 9 cr. hrs of 699/700

Master’s Thesis Committee
- Selection of permanent advisor by end of first year (chair of thesis committee)
- Preparation of individualized timeline for MS Plan A degree (see sample on p. 40)
- Appointment of two other members of TRMD graduate faculty to committee
  http://www.hawaii.edu/graduate/wa/selectmember.php
Advance to Candidacy

- Submission of thesis topic and proposal to thesis committee for their review and approval
  
  Format of written thesis proposal to be specified by thesis committee but should consist of sections on background and significance, specific aims, research design and methods, and preliminary studies.
  
  Thesis proposal should be presented as a departmental seminar
  
  Should be completed by the end of the third semester

- Obtain certification, approvals and guidance as needed:
  
  Committee on Human Studies
  www.hawaii.edu/irb/; 539-3955
  
  Environmental Health & Safety Office
  www.hawaii.edu/ehso/; 956-8660
  
  Institutional Animal Care and Use Committee
  www.hawaii.edu/ansc/IACUC/; 956-4446

- Submission of Advance to Candidacy Form II to Graduate Division
  
  Committee approval of thesis proposal
  
  Submission of all required approval documents
  
  Form II must be submitted prior to registering for Thesis 700

Final Examination

- Research seminar and oral examination covering thesis research and related areas
  
  Conducted by thesis committee; seminar open to all graduate faculty, students and general public
  
  To be held at least three weeks before the end of the term during which the degree is conferred

  A student failing the final examination may repeat it once at the discretion of the thesis committee.

  A student who fails the examination a second time will be dismissed from the program.

- Thesis Evaluation (Form III)
  
  Certification of final oral exam and thesis defense by thesis committee

- Thesis Submission (Form IV)
  
  Approval of the written thesis by thesis committee
  
  Replaces signature page of thesis document

ZO-1 (red) at the cell borders

MMP inhibitor GM6001 reverses the ZO-1 degradation
Master’s Plan B (Non-Thesis)

Tropical Medicine MS students are admitted into the MS Plan A program; conversion to MS Plan B may only be made in unusual circumstances and requires program approval.

Preliminary conference with graduate program chair
- Appointment of interim advisor
- Pre-Candidacy Progress (Form I) (complete relevant sections)

Preliminary conference with interim academic adviser
Identification and remediation plan for deficiencies (if applicable)

Diagnostic Evaluation
- First or second semester of residence
- Open book, short essay exam to evaluate background in infectious disease microbiology & immunology
- Used to advise the student on course of study and areas needing improvement

General (Qualifying) Examination
- Second semester of residence
- General exam (closed book, short essay answers with oral followup) with questions composed by TRMD faculty
- Evaluates student’s knowledge base of Tropical Medicine core course content (general medical microbiology, virology, bacteriology, parasitology, immunology, and bioinformatics)

Used to evaluate student progress and advise on course of study to correct weaknesses

Pass:
Advancement to candidacy for MS degree
A student whose exam and overall academic performance has been exceptional maybe recommended for continuation to the PhD program upon completion of the MS degree or for transfer to the PhD program

Fail:
Failed sections or the entire exam may be repeated once within 6 months of the date of the first exam
A student who fails the general examination a second time will be dismissed from the program

Pre-Candidacy Progress (Form I) (complete relevant section and submit to Graduate Division)
Successful completion of qualifying examination

Coursework requirements
(see section on Tropical Medicine Curriculum for course details)
- 30 credit hours (must be taken for an A-F letter grade)
- 18 hrs approved course work including TRMD core courses and excluding 699 and thesis 700
- Minimum 12 hrs in courses numbered 600-798
- Registration in thesis 700 during last semester; at least 9 cr. hrs of 699/700

Master’s Plan B Committee
- Permanent adviser; selected by end of the first year
- Two other members of TRMD faculty
  (refer to http://www.hawaii.edu/graduate/wa/selectmember.php)
- Preparation of individualized timeline for MS Plan B degree (see sample on p. 40)
Master’s Plan B (Non-Thesis) cont’d

Study Program and Research Project proposal
- Meet with committee to decide on study program before end of second semester
  Additional courses
  Research project proposal
- Obtain certification, approvals and guidance as needed:
  Committee on Human Studies
    www.hawaii.edu/irb/; 539-3955
  Environmental Health & Safety Office
    www.hawaii.edu/ehso/; 956-8660
  Institutional Animal Care and Use Committee
    www.hawaii.edu/ansc/IACUC/; 956-4446
- Completion and internal filing of modified Advance to Candidacy Form II

Final examination
- Comprehensive written and oral examination; demonstrate basic knowledge of the various fields encompassed by Tropical Medicine
  - To be conducted by candidate’s advisory committee
  - To be given at least three weeks before the end of the term in which the degree is conferred
- Presentation of research seminar and written paper covering research project
- Completion and internal filing of modified Progress Report Form III
  - Certification of completion of research seminar and written paper

Doctor of Philosophy

Preliminary conference with graduate program chair
Appointment of interim advisor
Pre-Candidacy Progress (Form I) (complete relevant sections)
Preliminary conference with interim academic advisor
Identification and remediation plan for deficiencies (if applicable)

Diagnostic Evaluation
- First or second semester of residence
- Open book, short essay exam to evaluate background in infectious disease microbiology & immunology
- Used to advise the student on course of study and areas needing improvement
Doctor of Philosophy cont’d
General (Qualifying) Examination
-Second semester of residence
-General exam (closed book, short essay answers with oral follow-up) with questions composed by TRMD faculty
-Evaluates student’s knowledge base of Tropical Medicine core course content in general medical microbiology, virology, bacteriology, parasitology, immunology, and bioinformatics.
*See Curriculum page 14 for list of core courses*
-Used to evaluate student progress and advise on course of study to correct weaknesses

**Pass:**
Advancement to candidacy for PhD degree

**Marginal Pass:**
A student whose examination and overall academic performance are inadequate to recommend for PhD candidacy may, at the discretion of the examination committee, be recommended to convert to a terminal Master’s degree program

**Fail:**
Failed sections or the entire exam may be repeated once within 6 months of the date of the first exam
A student who fails the general examination a second time will be dismissed from the program

Pre-Candidacy Progress (Form I) (complete relevant section and submit to Graduate Division)
Successful completion of qualifying examination

Coursework requirements
All PhD candidates, other than graduates of the TRMD MS program, are required to enroll in the TRMD core curriculum in order to prepare for the General (Qualifying) Examination. Additional courses which, based on the recommendations of their adviser and dissertation committee, are essential to prepare them for a research career in their area of specialization

Teaching experience
Candidates should gain teaching experience by serving as a teaching assistant in a graduate or undergraduate course, or in the medical education curriculum

PhD Dissertation Committee
-Selection of permanent advisor by end of first year (chair of dissertation committee)
-Preparation of individual timeline for PhD degree (see sample on p.41)
-Appointment of at least two other members of TRMD graduate faculty to committee
-Appointment of one outside member to committee
-Appointment of remaining committee members from TRMD or other UH graduate faculty;
-Although allowable, committees larger than five members are discouraged

For eligible committee member see:
http://www.hawaii.edu/graduate/wa/selectmember.php
Doctor of Philosophy cont’d
Advance to Candidacy
- Submission of dissertation topic and proposal to thesis committee for their review and approval
  Format of written thesis proposal may be similar to the document prepared for the comprehensive examination but should specify the actual scope of the dissertation research project
  Dissertation proposal should be presented as a departmental seminar
  Should be completed by the end of the third semester
- Obtain certification, approvals and guidance as needed:
  Committee on Human Studies
    www.hawaii.edu/irb/; 539-3955
  Environmental Health & Safety Office
    www.hawaii.edu/ehso/; 956-8660
  Institutional Animal Care and Use Committee
    www.hawaii.edu/ansc/IACUC/; 956-4446
- Advance to Candidacy (Form II)
  Appointment of dissertation committee
  Committee approval of research topic and proposal
  Results of the comprehensive exam
  Submission of all required approval documents
  Form II must be submitted to Graduate Division prior to registering for Dissertation 800

Final Examination and Dissertation Defense
- Administered by the dissertation committee upon completion of the dissertation research in the form of a seminar presentation, defense and oral examination
- Committee evaluation is based on the following criteria:
  Student’s proficiency in the area of specialization within the field of Tropical Medicine as commensurate with the expectations of the PhD degree
  Production of a body of work which is on par with program expectations for the specific degree
  The ability of the student to effectively communicate and defend this body of work
- A majority of the committee must vote to pass the student in order for student to pass the exam.
- The exam may be repeated once.
- Failure to pass the final examination after two attempts will result in dismissal from the graduate program.
- Complete at least 6 wks before end of semester in which degree granted

Dissertation Evaluation (Form III)
- Signed by doctoral committee members who participate in final defense, including proxies
  Approval of dissertation document and student’s defense
- Submit no later than 3 wks prior to dissertation due date

Dissertation Submission (Form IV)
- Replaces signature page of dissertation
  Approval of the content and form of the final dissertation document
- Signed by dissertation committee chair and majority of committee, including committee member(s) who may have been absent at the defense
- Due date specified in the Academic Calendar
Academic Policies
Undergraduate and graduate students in the School of Medicine must adhere to the academic policies of UH Manoa. A summary description of these policies may be found in the online catalog:
http://www.catalog.hawaii.edu/about-uh/campus-policies/campus-policies.htm

UH Mānoa Student Conduct Code
http://www.hawaii.edu/student/conduct/

Graduate Academic Grievance Procedures
http://www.hawaii.edu/graduate/policies/html/grievance.htm
Curriculum

Prerequisites: All students are required to have a background of undergraduate courses in medical microbiology, molecular and cell biology, organic chemistry and biochemistry, physics, and mathematics. An introductory course in immunology (e.g. MICR 461) is highly recommended.

The required and/or recommended courses for Tropical Medicine MS and PhD programs are divided into three groups:

Group I - Tropical Medicine Core Courses

The core curriculum for both MS and PhD students is as follows:

<table>
<thead>
<tr>
<th>Semester</th>
<th>Course Title</th>
<th>Credit Hrs</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Fall Semester Yr 1:</strong></td>
<td></td>
<td></td>
</tr>
<tr>
<td>TRMD 603</td>
<td>Infectious Disease Microbiology I: Parasitology</td>
<td>3</td>
</tr>
<tr>
<td>TRMD 604</td>
<td>Concepts in Immunology and Immunopathogenesis</td>
<td>2</td>
</tr>
<tr>
<td>TRMD 653</td>
<td>Bioinformatics for Infectious Disease</td>

PhD Comprehensive Exam

The Tropical Medicine PhD Comprehensive Examination will consist of the preparation and defense of a research proposal based on the student’s dissertation research project. This examination should be administered by the end of the second year of the student’s PhD training. The exact format of the proposal is to be specified by the dissertation committee; however it should generally follow the format of a grant proposal to a major funding agency such as the National Institutes of Health or the National Science Foundation. The proposal should be prepared in consultation with the student’s research advisor but should include at least one innovative objective that is not included as part of an existing grant or a proposal developed by the advisor. The student’s written proposal will be submitted to the members of the student’s dissertation committee and an oral examination based on the written proposal will be carried out by the committee. The content of this oral examination may include fundamental concepts underlying the hypotheses addressed in the proposal, technical or experimental design issues, and any other topics which the committee feels are pertinent to the student’s understanding of his/her research area. A majority of the committee must vote to pass the student in order for student to pass the exam. The exam may be repeated once. Failure to pass the comprehensive exam after two attempts will result in dismissal from the graduate program. (see pages 11-12 for information)

Guidelines for preparation of the Comprehensive Exam Proposal:

The following guidelines are based on restructured application instructions for NIH R01 grant applications.

For more details and examples of successful R01 proposals, please refer to the following websites:

Sample R01 applications:

Comprehensive Exam Proposal Guidelines

Project Summary and Relevance

- State the proposal’s broad, long-term objectives and specific aims, making reference to the health relatedness of the project (i.e., relevance to the mission of the agency). Describe concisely the research design and methods for achieving the stated goals. This section should be informative to other persons working in the same or related fields and insofar as possible understandable to a scientifically or technically literate reader. Avoid describing past accomplishments and the use of the first person.

- The second component of the Description is Relevance. Using no more than two or three sentences, describe the relevance of this research to public health. In this section, be succinct and use plain language that can be understood by a general, lay audience.
Specific Aims
State concisely the goals of the proposed research and summarize the expected outcome(s), including the impact that the results of the proposed research will field that the proposed project addresses.
Explain how the proposed project will improve scientific knowledge, technical capability, and/or clinical practice in one or more broad fields.
Describe how the concepts, methods, technologies, treatments, services, or preventative interventions that drive this field will changed if the proposed aims are achieved.

Innovation
- Explain how the application challenges and seeks to shift current research or clinical practice paradigms.
- Describe any novel theoretical concepts, approaches or methodologies, instrumentation or intervention(s) to be developed or used, and any advantage over existing methodologies, instrumentation or interventions.

Approach
- Describe the overall strategy, methodology, and analyses to be used to accomplish the specific aims of the project. Include how the data will be collected, analyzed and interpreted.
- Preliminary Studies: Discuss the PD/PI’s preliminary studies, data, and/or experience pertinent to this application. Preliminary data can be an essential part of a research grant application and help to establish the likelihood of success of the proposed project.
- Discuss potential problems, alternative strategies, and benchmarks for success anticipated to achieve the aims.
- Describe any strategy to establish feasibility, and address the management of any high risk aspects of the proposed work.
- Point out any procedures, situations, or materials that may be hazardous to personnel and precautions to be exercised. A discussion on the use of Select Agents should be provided.
(If an applicant has multiple Specific Aims, then the applicant may address Significance, Innovation and Approach for each Specific Aim individually, or may address Significance, Innovation and Approach for all of the Specific Aims collectively.)

Protection of Human Subjects
- Describe and justify the proposed involvement of human subjects, inclusion of women and minorities, and inclusion of children in the work outlined in the Research Strategy section.
- Describe the characteristics of the subject population, including their anticipated number, age range, and health status if relevant.
- Describe sources of material, potential risks to subjects (physical, psychological, financial, legal, or other), and protection against risks.
- Describe and justify the sampling plan, as well as the recruitment and retention strategies, informed consent, and the criteria for inclusion or exclusion of any subpopulation.
- Explain the rationale for the involvement of special vulnerable populations, such as fetuses, neonates, pregnant women, children, prisoners, institutionalized individuals, or others who may be considered vulnerable populations. Note that ‘prisoners’ includes all subjects involuntarily incarcerated (for example, in detention centers) as well as subjects who become incarcerated after the study begins.
Vertebrate Animals
If vertebrate animals are involved in the project, address each of the five points below. This section should be a concise, complete description of the animals and proposed procedures.

- Provide a detailed description of the proposed use of the animals for the work outlined in the Research Strategy section. Identify the species, strains, ages, sex, and numbers of animals to be used in the proposed work.

- Justify the use of animals, the choice of species, and the numbers to be used. If animals are in short supply, costly, or to be used in large numbers, provide an additional rationale for their selection and numbers.

- Provide information on the veterinary care of the animals involved.

- Describe the procedures for ensuring that discomfort, distress, pain, and injury will be limited to that which is unavoidable in the conduct of scientifically sound research. Describe the use of analgesic, anesthetic, and tranquilizing drugs and/or comfortable restraining devices, where appropriate, to minimize discomfort, distress, pain, and injury.

- Describe any method of euthanasia to be used and the reason(s) for its selection. State whether this method is consistent with the recommendations of the American Veterinary Medical Association (AVMA) Guidelines on Euthanasia. If not, include a scientific justification for not following the recommendations.

Select Agent Research
If any of the activities proposed in the application involve the use of Select Agents at any time during the proposed project period, either at the applicant organization or at any other Project/Performance Site, address the following three points for each site at which Select Agent research will take place.

- Identify the Select Agent(s) to be used in the proposed research.

- Provide the registration status of all entities* where Select Agent(s) will be used. If the Project/Performance Site(s) is a foreign institution, provide the name(s) of the country or countries where Select Agent research will be performed.

*An “entity” is defined in 42 CFR 73.1 as “any government agency (Federal, State, or local), academic institution, corporation, company, partnership, society, association, firm, sole proprietorship, or other legal entity.”

- Provide a description of all facilities where the Select Agent(s) will be used. Describe the procedures that will be used to monitor possession, use and transfer of the Select Agent(s).

Describe plans for appropriate biosafety, biocontainment, and security of the Select Agent(s).

Describe the biocontainment resources available at all performance sites.
Student Learning Outcomes

**Master of Science in Biomedical Sciences (Tropical Medicine)**

1. Demonstrate a fundamental knowledge base in the major subdisciplines of the field of Tropical Medicine: bacteriology, virology, mycology, parasitology, immunology, molecular epidemiology, and infectious disease ecology and bioinformatics.

2. Demonstrate a mastery of technical and experimental methodologies required to conduct research in the field of Tropical Medicine.

3. Demonstrate the ability to plan, execute, interpret, and evaluate experimental studies in Tropical Medicine.

4. Demonstrate skills required for instruction, assessment and mentoring of undergraduate and MS level students.

5. Demonstrate proficiency in written and verbal communication skills in classroom lectures and other teaching formats and in professional seminars and presentations.

6. Demonstrate sufficient mastery and scientific maturity to assess the work of peers in related fields.

**Doctor of Philosophy in Biomedical Sciences (Tropical Medicine)**

1. Demonstrate an advanced knowledge base in the major subdisciplines of the field of Tropical Medicine: bacteriology, virology, mycology, parasitology, immunology, molecular epidemiology, and infectious disease ecology and bioinformatics.

2. Demonstrate a mastery of technical and experimental methodologies required to conduct research in the field of Tropical Medicine.

3. Demonstrate the ability to plan, execute, interpret, and evaluate experimental studies in Tropical Medicine.

4. Demonstrate skills for instruction, assessment and mentoring of undergraduate, MS and PhD level students.

5. Demonstrate skills to verbally communicate scientific concepts and results in classroom lectures and other teaching formats and in professional seminars and presentations.

6. Demonstrate written communication skills as required in various professional duties including manuscript preparation for scientific publication, preparation of research grant applications, preparation of lecture notes, development of introductory and advanced courses in related disciplines.

7. Demonstrate sufficient mastery and scientific maturity to assess the work of peers in related fields.

8. Develop administrative skills to manage a research laboratory, supervise technical and professional staff, and assume responsibilities and provide leadership as a faculty member.

*I"=introduced; “R”=reinforced and opportunity to practice; “M”=mastery at the senior or exit level; “A”=assessment evidence collected (Exams??)
TRMD 499 Reading and Research (V) Directed reading and research in laboratory; diagnostic aspects of bacterial, parasitic, and viral infections. Pre: consent.

TRMD 500 Master’s Plan B/C Studies (1) Enrollment for degree completion. Pre: master’s Plan B or C candidate and consent.

TRMD 545 Topics in Tropical Medicine (V) Elective for fourth-year medical students for advanced study of selected topics within the field of tropical medicine and medical microbiology. Pre: fourth-year standing.

TRMD 595 (Alpha) Selected Topics in Infectious Diseases (1) Elective for medical students; (B) infectious diseases; (C) parasitology; (D) epidemiology; (E) immunology. MD majors only. CR/NC only. Pre: MDED 554 or consent. Fall only.

TRMD 599 (Alpha) Selected Research Topics in Infectious Diseases (1) Research elective for medical students; (B) infectious diseases; (C) parasitology; (D) epidemiology; (E) immunology. MD majors only. CR/NC only. Pre: MDED 554 or consent. Fall only.

TRMD 601 Tropical Medicine Journal Club (1) Discussion of current literature relevant to Tropical Medicine. Repeatable.

TRMD 603 Infectious Disease Microbiology I: Medical Parasitology (3) Epidemiology, pathogenesis, immunobiology and diagnostic aspects of human parasitic infections; principles of host-pathogen interactions; public health aspects of parasitic infections. Repeatable one time. A-F only. Pre: MICR 351 or equivalent. (Fall only)

TRMD 604 Concepts in Immunology and Immunopathogenesis (2) Immunological concepts relating to infectious diseases and host pathogen interactions. Repeatable one time. A-F only. Pre: MICR 461 (or equivalent) or consent. (Cross-listed as PH 665)

TRMD 605 Infectious Disease Micro II (3) This course will cover different families of animal viruses of importance to human diseases. The genome, structure, and replication cycle of viruses, as well as host immune responses, epidemiology, clinical features and animal models will be covered and integrated to understand the pathogenesis of diseases caused by different viruses and intervention strategies of therapy and vaccine. Repeatable one time. A-F only. Pre: MICR 351 and TRMD 604; or consent. Spring only. (Cross-listed as PH 667)

TRMD 606 Tropical Medicine Laboratory Rotations (V) Practical experience in use of equipment and procedures in infectious disease and immunology research; introduction to research in tropical medicine. Repeatable unlimited times. Pre: 604 (or concurrent), or consent. (Cross-listed as PH 668)
TRMD Course Descriptions cont’d

TRMD 607 Neurovirology (1) Seminar course on neuroinvasive viruses giving basics of viruses causing nervous system diseases and discussing recent advances in the research field of neurovirology. Pre: MICR 351 or equivalent; or consent. Fall only.

TRMD 608 Infectious Disease Micro III (3) This course will cover the basic structure, physiology and genetics of pathogenic bacteria as well as the host response to these organisms. Major bacterial diseases will be covered in depth to correlate bacterial structure, physiology, epidemiology and host response to these microorganisms to understand the pathogenesis of the diseases they cause. Repeatable one time. A-F only. Pre: MICR 351 and TRMD 604; or consent. Fall only.

TRMD 609 Advances In Medical Immunology (3) Presentations/discussions of current literature concerning recent advances in immunology relevant to disease and to disease processes. Pre: consent. (Alt. years: spring)

TRMD 610 Infection and Immunity (2) This course will provide a detailed description of specific pathogens (bacterial, viral, parasitic and fungal) and their interactions with the human immune system, including innate and acquired immunity.

TRMD 650 Advanced Epidemiological Ecology of Infectious Diseases (2) Applications of population biology, pathogen/host life history, and population genetics to infectious disease epidemiology, including micro- and macroparasites, and implications to disease control and prevention of strategies. A-F only. Pre: 604 (or concurrent) and 605 (or concurrent), or consent. (Alt. years: spring)

TRMD 652 Advanced Genetics and Evolution of Infectious Diseases (2) An evolutionary perspective to examine the interactive responses between infectious agents and the immune system. Topics will include natural selection, life history evolution, population genetics of pathogens and hosts, and anti-microbial resistance. A-F only. Pre: 604 (or concurrent) and 605 (or concurrent), or consent. (Alt. years: spring)

TRMD 653 Bioinformatics for Infectious Diseases (1) Combined lecture/computer lab course on bioinformatic tools used in genomics, including sequence assembly, search algorithms, alignment, phylogenetics, and molecular evolution/epidemiology. Focus will be on infectious disease examples. Open to nonmajors. A-F only. Pre: 604 (or concurrent) and 605 (or concurrent) or consent. Fall only.

TRMD 671 Advanced Medical Parasitology (2) Consideration of ultrastructure, physiology, biochemistry, in-vitro cultivation and host-parasite relationship of parasites of medical importance. A-F only. Pre: consent. (Alt. years: fall)

TRMD 672 Advanced Medical Virology (2) In-depth study of the major groups of viruses pathogenic for human; virus replication, host range, pathogenesis, immunology, and epidemiology. Pre: 605 or equivalent, or consent. (Alt. years: fall)

TRMD 673 Advanced Medical Bacteriology (2) Role of bacteria in infectious diseases, with emphasis on clinical aspects and identification of etiological agents. Pre: 605 or equivalent, or consent.
TRMD 690 Seminar in Tropical Medicine and Public Health (1) Weekly discussion and reports on current advances in tropical medicine and public health. (Cross-listed as PH 755)

TRMD 695 Plan B Master’s Project (3) Independent study for students working on a Plan B Master’s project. A grade of Satisfactory (S) is assigned when the project is satisfactorily completed. Pre: graduate standing in TRMD.

TRMD 700 Thesis Research (V) Research for master’s thesis. Approval of department faculty required.

TRMD 705 Special Topics in Tropical Medicine (1) Advanced instruction in frontiers of tropical medicine and public health. Repeatable. (Cross-listed as PH 756)

TRMD 800 Dissertation Research (V) Research for doctoral thesis. Approval of department faculty is required.

Pharmacology (PHRM) Course Descriptions

PHRM 201 Introduction to General Pharmacology (2) Drugs discussed with emphasis on sites and mechanism of action, toxicity, fate, and uses of major therapeutic agents. Pre: mammalian physiology and dental hygiene major. NI DB

PHRM 203 General Pharmacology (3) Similar to 201 but wider in scope of drugs discussed. Intended for undergraduates in the health sciences and related fields. Pre: mammalian physiology. NI DB

PHRM 499 Directed Reading and Research (V) Directed reading and research in experimental pharmacology. Repeatable unlimited times. Pre: consent.

PHRM 500 Master’s Plan B/C Studies (1) Enrollment for degree completion. Repeatable unlimited times. Pre: master’s Plan B or C candidate and consent.

PHRM 595 Principles of Pharmacology (1) Pharmacology elective course for medical students. MD students only. CR/NC only. Pre: MDED 554 or consent. (Fall only)

PHRM 599 Research in Pharmacology (V) Pharmacology research elective for medical students. MD majors only. CR/NC only. Pre: MDED 551 or consent.

PHRM 601 General Pharmacology (3) Pharmacodynamics, receptor theory, modeling, clinical trials and the FDA will be covered. Concepts in ADME/T and clinical research are also considered. Pre: consent.
PHRM 602 Systemic Pharmacology (9) Provides instruction at an organ systems/functional level covering major organ and functional systems of the human body. Concepts in pharmacological research at the animal, organ system and whole human level will also be considered. Repeatable one time. Pre: consent.

PHRM 640 Neuropharmacology (2) Physiology and pharmacology of central and peripheral nervous systems, focusing on synaptic chemistry and signaling. A-F only. Pre: CMB 606, or consent from the course director. (Cross-listed as CMB 640)

PHRM 699 Directed Research (V) Repeatable unlimited times.

PHRM 700 Thesis Research (V) Repeatable unlimited times.

PHRM 800 Dissertation Research (V) Repeatable unlimited times.
Scholarships, Awards and Tuition Waivers
Graduate Assistantships

**Teaching Assistantships**

Teaching assistants (TAs) usually have a 9-month appointment that corresponds with the academic year. The specific duties of a TA vary depending on the needs of the department and on the qualifications and experiences of the TA. All TAs serve under the direction and supervision of a regularly appointed member of the faculty. They may teach a section of a multi-section course or a laboratory section of a course. In addition, they may assist a faculty member in grading assignments or exams, advising students, or performing course-related administrative duties. Occasionally, an experienced TA may be assigned as the instructor of a course. In such a case, the TA must meet all the qualifications required of a lecturer for the course, or have completed a relevant training program. All new TAs are required to attend a training session offered by the Office of Faculty Development and Academic Support — Center for Teaching Excellence.

University policy stipulates that in a course taught by a TA, the determination of final grades is the responsibility of the supervising faculty. However, since the TA plays a significant role in determining grades, the supervising faculty and the TA should thoroughly discuss course grading policies and procedures. To ensure fairness to all students enrolled in the course, grading policies and procedures should be announced in the beginning of the semester. TAs should be knowledgeable about official university policies on credits and grades, disciplinary actions, and academic grievance procedure. They should also be aware of the various student services available at the Office of Student Affairs, so that they may refer students to the appropriate resources when necessary.

**Research Assistantships**

Research assistants (RAs) usually have an 11-month appointment. In general, a RA supports the research activities of a faculty who is the principal investigator of a funded project. The specific duties of a RA vary depending on the needs of the project and on the qualifications and experiences of the RA. The duties may be directly or tangentially related to the RA’s program of study, while results from the research project may be incorporated into a thesis or dissertation as relevant. Some RAs exercise a great degree of independence while performing their duties; others carry out specific tasks that leave little room for independent judgment. RAs should be knowledgeable about official university policies on research and publication.

**Tuition Exemption**

GAs with 0.50 FTE appointments receive a full tuition exemption. New GAs with 11-month appointment must be employed for at least 12 weeks during the first semester in order to receive the tuition exemption. Tuition exemptions apply only to fall and spring semesters, and may NOT be used for Outreach College and Distance Education courses. Summer Session tuition exemptions, when available, are issued by the Outreach College. GAs are responsible for the payment of fees. GAs who resign before serving at least three-quarters of a semester are liable for repayment of tuition exemptions.
**Health Plan**
GAs with 0.50 FTE appointment who serve for a minimum of three months are eligible for health plan benefits. For more information, contact the personnel officer in the department or unit of hire.

**Parking Permit**
To purchase parking permits, GAs need to obtain first a memo from their department or unit of hire. They then present the memo along with all other required documents to the Parking and Transportation Services.

**Graduate Division Achievement Awards**
A limited number of merit-based Graduate Division Achievement Scholarships are available to qualified Tropical Medicine graduate students.

**Eligibility & How to Apply**
To be eligible, a student must be a student in the master’s or doctoral program and have a cumulative GPA of 3.5 or above. Students apply through their graduate programs. Awards are competitive. US citizens and permanent residents may apply for funding related to support any aspect of their education and training while non-residents may only apply for tuition support.

**Award Amount**
The award amount varies, depending on the purpose of the award and funding availability. Minimum award is $500.

**Award Conditions**
Award recipients must maintain an enrollment of six credits or more of degree-related courses and a cumulative GPA of 3.5 or above, for the entire period of the award. Recipients will be liable to reimburse UHM for the full amount of the award, if they fail to meet the award conditions or if for any other reason the award becomes invalid.

**Award Distribution Procedure**
The Graduate Division allocates achievement scholarships to graduate programs, which in turn distribute the awards to qualified students via BANNER and STAR at the time of registration. For scholarships made to international students, the total amount of awards distributed via BANNER and STAR may not exceed the total cost of tuition and fees.
Joseph E. Alicata Award in Tropical Medicine

The Joseph E. Alicata Award was established in 1981 by Dr. Joseph Alicata and Mrs. Earleen Alicata to encourage the study of Tropical Medicine and Infectious Diseases and to reward outstanding scholastic achievement by graduate students in this field of study. It commemorates the lifetime achievements of Dr. Alicata in parasitology and public health as a professor at the University of Hawaii and a commissioned officer of the US Public Health Service.

There are two merit-based mechanisms for distribution of the Alicata Award:

1. A partial graduate assistantship to selected, incoming PhD students during their first year of graduate training,

2. An achievement award to graduating PhD students during the final semester of their graduate education.

In both cases the award amount varies depending on the purpose of the award and funding availability.

2011 recipients of Alicata Award James Kelley, Esther Volper, and Yeung Tutterow (second from left to right) receive congratulations from Dr. Chang (left).
WICHE Program

The Tropical Medicine graduate program participates in the Western Regional Graduate Program (WRGP), administered by the Western Interstate Commission on Higher Education (WICHE). The program enables legal residents of WICHE member states to enroll in selected out-of-state graduate programs at reduced tuition rates. Below is a list of WICHE member states.

- Alaska
- Arizona
- California
- Colorado
- Hawaiʻi
- Idaho
- Montana
- Nevada
- New Mexico
- North Dakota
- Oregon
- South Dakota
- Utah
- Washington
- Wyoming

Through WRGP, legal residents of WICHE member states may enroll in selected out-of-state graduate programs at resident tuition rates. They apply directly to the institutions of their choice and identify themselves as WICHE WRGP applicants. WICHE WRGP applicants applying to UHM are required to meet the GPA requirement of 3.5 or higher, or otherwise possess certain exceptional abilities as affirmed by the UHM graduate program to which they apply.

Other Funding Opportunities

In addition to the mechanisms described above, there are a number of intramural and extramural funding opportunities available to Tropical Medicine graduate students. For more information on these resources, consult the Graduate Division funding opportunities site:

### Core Courses:
- TRMD 605: IDM II (Virology)
- TRMD 608: IDM III (Bacteriology & Mycology)
- TRMD 690: TRMD Seminar

### Elective, Advanced Courses
- TRMD 690: TRMD Seminar

### TRMD 699: Directed Research
- TRMD 699: Directed Research

### Fall or Spring:
- CMB 626 or MICR 614: Research Ethics
- TRMD 699: Dir. Reading (Journal Club)

### August: Qualifying Exam
- Comprehensive Exam: review of written grant proposal and oral examination by committee

### Completion of Form I: Pre-candidacy progress
- Completion of Form II: Advance to Candidacy

### Poster Presentation at Local Conference
- Oral or Poster Presentation at Local or National Conference

### Summer
- TRMD 699: Directed Research

### TRMD 690: TRMD Seminar (Dissertation Seminar & Defense)

### Summer
- TRMD 690: TRMD Seminar (Dissertation Seminar & Defense)

### TRMD 699: Directed Research
- TRMD 699: Directed Research

### TRMD 699: Directed Research
- TRMD 699: Directed Research

### TRMD 699: Directed Research
- TRMD 699: Directed Research

### TRMD 800: Dissertation Research (requires prior submission of Form II)

### Fall or Spring:
- TRMD 699: Dir. Reading (Journal Club)

### Final Examination and Dissertation Defense: seminar presentation, defense and oral examination

### Completion of Form III: Dissertation Evaluation

### Completion of Form IV: Approval of Written Dissertation

### Poster Presentation at Local or National Conference

### Oral or Poster Presentation at Local or National Conference

### Oral or Poster Presentation at National Conference

### Summer
- Oral or Poster Presentation at National Conference

### Write & submit research manuscripts

### Summer
- Write & submit research manuscripts
